

Writing Assignment 12

Due Monday, November 16, 11:59 PM

The Greek philosopher Zeno came up with many paradoxes. There are three I'd like you to read about—you can find them in the Zeno's paradoxes article on Wikipedia:

https://en.wikipedia.org/wiki/Zeno%27s_paradoxes

The three paradoxes I'd like you read there are : The Dichotomy paradox, the paradox of Achilles and the tortoise, and the Arrow paradox.

Choose one of these, and—if appropriate, using ideas we have seen in calculus class—try to resolve the paradox. For example, you might explain why Zeno's reasoning was incorrect somewhere, or you might reframe the problem so that there is no paradox.
