

## Writing Assignment 5

Due Monday, March 8, 11:59 PM

We have finished the part of the semester that focuses on derivatives.

Do you feel like you understand what derivatives are good for? How they are defined? What they measure?

What are some things you wish you understood better about derivatives?

What are some things you are happy to have learned about derivatives?

Warning: I will not be able to assess your response for your understanding without concrete mathematical content.
